

5. What is the purpose of the "Data/Model" view in Power BI?

- **Data View:** lets you preview, sort, and explore the actual loaded data
- **Model View:** shows relationships between tables (like ER diagrams), lets you create/edit relationships, set cardinality, and manage filters

13. Troubleshoot: Slicers not affecting all visuals—how to fix?

- Select the slicer → Go to **Format > Edit Interactions**
- For each visual, ensure the **filter icon** is selected (not "none")
- Also ensure:
 - The field used in the slicer is related to the tables in visuals
 - Check **Model view** for relationships
